

Рубежный контроль № 2

Условие:

Рубежный контроль представляет собой разработку тестов на языке Python.

- 1) Проведите рефакторинг текста программы рубежного контроля №1 таким образом, чтобы он был пригоден для модульного тестирования.
- 2) Для текста программы рубежного контроля №1 создайте модульные тесты с применением TDD - фреймворка (3 теста).

Текст программы

main.py

```
from operator import itemgetter
```
